

**SYNTHETIC WASHABLE AIR FILTER CLEANER
P/N 223-00**

DIRECTIONS FOR CLEANING YOUR AIR FILTER

1. Remove the air filter from the housing and intake tube. Gently shake and tap the filter to remove all excess debris and dirt particles.
2. Spray a generous amount of cleaner directly onto each side of the air filter, applying more to the dirtiest side. Allow the cleaner to soak for ten minutes, but DO NOT allow to dry.
3. Using cool to warm temperature water (DO NOT USE HOT WATER), rinse the filter from the clean side through to the dirty side. Light water pressure is suggested, and repeating steps 2 and 3 may be necessary until the water flowing through the media is clear to remove all dirt present.
4. Once rinsed, shake excess water from the air filter and allow to dry. You may use compressed air to speed this process, holding the nozzle 12 inches from the filter surface. You may reinstall the filter when slightly damp or dry, reversing the removal process.

WARNING! Avoid contact with skin and eyes. Do not eat, drink, or smoke when using this product. Always wash hands after handling the product. Store in a well ventilated place. Keep cool. Dispose of materials or solid residues at an authorized site.

In case of fire – water spray, dry powder, foam, or carbon dioxide.

First Aid – If you feel unwell, seek medical advice. If inhaled, remove person to fresh air and keep comfortable for breathing. If on skin, wash skin with plenty of water. In in eyes, rinse eyes with water as a precaution. If ingested, call a poison center/doctor/physician if you feel unwell.
